Reminders 08-05-09:

- Exam 4 Today
- Read Chapters 20 and 21
- Answers to Standardized Test p. 561 1D, 2C,

3A, 4D, 5A, 6C, 7D, 8B, 9B

Objectives:

- Coulomb's Law
- Electric Fields
- Ohm's Law

Two charges, $\mathrm{q}_{\mathrm{A}}$ and $\mathrm{q}_{\mathrm{B}}$, are at rest near a positive test charge, $\mathrm{q}_{\mathrm{T}}$, of $7.2 \mu \mathrm{C}$. The first charge, $\mathrm{q}_{\mathrm{A}}$, is a positive charge of $3.6 \mu \mathrm{C}$, located 3.5 cm away from $\mathrm{q}_{\mathrm{T}}$ at $35^{\circ} ; \mathrm{q}_{\mathrm{B}}$ is a negative charge of $-8.9 \mu \mathrm{C}$, located 6.8 cm away at $130^{\circ}$.
$\underset{\text { force caused by } q \mathrm{~A}}{\text { (a) }}$ Determine the magnitude of each of the forces acting on $\mathrm{q}_{\mathrm{T}}$.

(b) Sketch a force diagram. (Do this on paper. Your instructor may ask you to turn in this work.)

The two pith balls below each have a mass of 2.5 g and equal charge. One pith ball is suspended by an insulating thread. The other is brought to $x=4.0 \mathrm{~cm}$ from the suspended ball. The suspended ball is now hanging with the thread forming an angle of $30.0^{\circ}$ with the vertical. The ball is in equilibrium with $\mathrm{F}_{\mathrm{E}}, \mathrm{F}_{\mathrm{g}}$, and $\mathrm{F}_{\mathrm{T}}$. Calculate each of the following.
